JANGAM DHANWANTH

AI Engineering • Agentic AI • Multi-Agent Systems • GraphRAG & Backend Systems

dj1633@srmist.edu.in | dhanwanthjangam@gmail.com | +91 9849800927 | Chennai / Andhra Pradesh, India
linkedin.com/in/jangam-dhanwanth | github.com/Dhanu2007-G | Google Developer Profile (GDG)

EDUCATION

SRM Institute of Science and Technology — B.Tech in CSE (Artificial Intelligence & Machine Learning) — **Chennai, India | 2024 – 2028**

CGPA: 8.7 / 10.0 • Coursework: Deep Learning, NLP, Distributed Systems, Data Structures & Algorithms, DBMS, OS — 2024 – 2028 Cohort

Class XII (AP Intermediate): Ashwamedha Junior College, Andhra Pradesh — **935 / 1000 (93.5%)** — Board of Intermediate Education, AP

Class X (AP SSC): JCR Chaitanya High School, Andhra Pradesh — **552 / 600 (92.0%)** — Board of Secondary Education, AP

TECHNICAL SKILLS

Core AI / ML & NLP:	**PyTorch**, **Hugging Face** (Transformers), **scikit-learn**, Vector Embeddings (BGE), Sentence Transformers, Prompt Engineering.
Agentic AI & LLM Systems:	**LangGraph**, Multi-Agent State Machines, ReAct Loops, **LangChain**, **LlamaIndex**, Anthropic Claude API, Gemini API, OpenAI API.
RAG & Vector Databases:	**GraphRAG**, **Neo4j** (Cypher Queries), **Qdrant Vector DB**, Hybrid Retrieval (Dense + BM25 Lexical + Graph Walk), Reciprocal Rank Fusion (RRF).
Backend & Cloud Systems:	**Python** (AsyncIO, OOP, Clean Code), **FastAPI**, **Docker** (Sandboxing & Containers), **PostgreSQL**, **Redis Streams**, **Git/GitHub**, Linux/Bash.

TECHNICAL PROJECTS (AGENTIC AI & ENTERPRISE SYSTEMS)

SWE-Agent: Autonomous Software Engineering & Code Repair Agent — github.com/Dhanu2007-G/swe-agent

LangGraph State Machine • Claude 3.5 Sonnet • Docker Sandbox • AST Polyglot Search • PyTest • Git API — Production Architecture

- Architected an enterprise-grade agentic AI system automating multi-turn code repair across polyglot repositories using **LangGraph** state machines, checkpointing, and human-in-the-loop oversight.
- Engineered an AST symbol extractor and BM25 hybrid search engine, pruning multi-file codebases into precise token contexts (<100k tokens) and auto-detecting broken dependencies.
- Implemented an isolated Docker sandbox with `--cap-drop ALL`, read-only rootfs, and non-root execution, reproducing tests, generating patches, and self-correcting via a 3-retry loop.
- Automated cross-repository GitHub forking, branch generation, and verified Pull Request submission with **340+ unit and integration tests (98.9% test coverage)** and automated CI pipelines.

AEIMPS: Enterprise Architectural Memory & Multi-Modal GraphRAG Platform — github.com/Dhanu2007-G/aeimps

Neo4j (Cypher) • Qdrant Vector DB • PyTorch • BGE-Large / M3 • FastAPI • Redis Streams • Next.js — Full-Stack Enterprise RAG

- Developed an enterprise architectural intelligence engine combining **Neo4j knowledge graphs** (AST call hierarchies, schema relationships) with **Qdrant vector databases** for grounded context.
- Constructed Tri-Hybrid Retrieval with **Reciprocal Rank Fusion (RRF)** across dense BGE embeddings, sparse BGE-M3 lexical tokens, and Cypher graph walks, achieving **36ms P50 retrieval latency**.
- Engineered distributed ingestion workers with PyMuPDF, PaddleOCR, and Qwen2-VL to extract entities and ingest complex architectural diagrams, blueprints, and multi-page technical documentation.
- Enforced 4-tier Role-Based Access Control (Admin/Manager/Analyst/Viewer), cryptographic audit logs, and rate-limiting quotas across 5 microservices.

Helios AIOps: Autonomous Telemetry Anomaly Detection & Self-Healing Engine — github.com/Dhanu2007-G/Helios---AIops

Python • Kafka • Prometheus • scikit-learn • Isolation Forest • Drain3 • Causal DAG RCA — Real-Time Telemetry System

- Constructed a real-time autonomous AIOps platform ingesting streaming microservice telemetry to detect latency anomalies, memory leaks, and GC thrashing cascades under high load.
- Deployed unsupervised anomaly detection using **scikit-learn Isolation Forests** and Drain3 log pattern clustering, suppressing false alert noise and pinpointing root causes within 1.2s.
- Integrated causal Directed Acyclic Graph (DAG) correlation to calculate incident blast radius and automatically execute remediation playbooks with human verification.

EXPERIENCE & COMMUNITY LEADERSHIP

Google Developer Groups (GDG) On Campus — SRMIST KTR — Chennai, India | 2025

Technical Member & Event Volunteer • Developer Community & Technical Workshops — Verified GDG Badge

- Volunteered in organizing technical workshops, developer meetups, and study jams on campus, engaging 500+ student attendees on cloud technologies, Git practices, and modern developer tooling.
- Collaborated with core organizers to facilitate peer learning sessions and open-source contribution drives.

CREDENTIALS & BADGES

- **Google Cloud / DeepMind:** Gemini Enterprise Ready Badge — Verified GEAR Badge
- **Google Developer Profile:** Verified GDG on Campus Member • View Public Profile
